Frontend Engineer

ASWHITE VIETNAM

Main Responsibility

- Primary frontend developer for the **Flexigrow Finance** application, owning frontend architecture and hands-on implementation using React and Next.js.
- Defined component architecture, folder structure, and naming conventions to improve consistency and long-term maintainability.
- Built a reusable form system by wrapping React Hook Form with Shadcn/UI components, significantly reducing duplicated logic.
- Migrated UI stack from MUI to Shadcn/UI with Tailwind CSS, improving performance and design flexibility.
- Implemented dashboards with data visualization (Recharts), multi-step registration flows, and calendar-based scheduling with drag-and-drop interactions.
- Integrated Stripe payment processing into a multi-step Next.js form flow, handling secure checkout, validation, and payment state management.
- Applied role-based access control (RBAC) using CASL to support multiple user permission levels.
- Upgraded the application from Next.js 14 to 16, migrating the build system from Webpack to Turbopack.
- Set up code quality and testing infrastructure, integrating SonarQube scanning with Jest unit tests.
- Collaborated with designers, backend developers, and product managers to estimate work, refine requirements, and deliver client-facing features.

WordPress & CMS

- Developed custom WordPress themes using ACF and Elementor, including custom widgets for non-technical content editing.
- Optimized WordPress sites for SEO and performance, achieving Lighthouse scores of 100 across all categories.
- Handled deployment and hosting configuration for production environments.

Stacks: React, Next.js, TypeScript, Shadcn/UI, Tailwind, React Hook Form, Zustand, React

♦ 01/2018 - 01/2024

Frontend Engineer

Construct Digital

- Delivered web applications and marketing platforms for international clients using React, Vue.js, and TypeScript.
- Built interactive data visualization tools, including drag-and-drop interfaces and presentation-style performance modes.
- Implemented complex UI interactions using React Beautiful DnD and custom hooks.
- Collaborated with cross-functional teams to define TypeScript interfaces, reusable hooks, and frontend standards.
- Developed HubSpot and WordPress sites based on client requirements, balancing performance and editorial flexibility.

Stacks: React, VueJS, Wordpress, Javascript, Hubspot

♦ 05/2017 - 01/2018

Front End Developer

EPLUS

- Converted PSD designs into pixel-perfect HTML templates for commercial sale on ThemeForest.
- Ensured cross-browser compatibility and responsive layouts.

Stacks: HTML, CSS, Javascript, JQuery

Flexigrow Finance

Project URL: <https://portal.flexigrow.app/register/>

- **Description:** All-in-one admin + built-in insurance for NDIS providers and trades. Quote jobs, invoice, get paid, stay covered.
- **Role:** Frontend Engineer
- **Responsibilities:**
 - Frontend Architecture & UI System
 - Defined component structure, folder conventions, and naming standards to ensure consistency and long-term maintainability.
 - Built a reusable form system by wrapping React Hook Form with Shadcn/UI, reducing duplicated logic across the application.
 - Complex User Interfaces
 - Implemented role-based dashboards with data visualization using Recharts.
 - Built calendar-based scheduling with drag-and-drop interactions to manage staff tasks and events.
 - Developed multi-step registration and onboarding flows with robust validation.
 - Payments & Business Logic
 - Integrated Stripe payment processing into a multi-step Next.js flow, handling secure checkout, validation, and payment state management within the frontend.
 - State, Access & Security
 - Applied state management using Zustand and React Query for predictable data flow and server state handling.
 - Implemented role-based access control (RBAC) using CASL to support multiple permission levels.
 - Performance & Tooling
 - Migrated the application from Next.js 14 to Next.js 16, transitioning the build system from Webpack to Turbopack.
 - Improved performance and design flexibility by migrating from MUI to Shadcn/UI with Tailwind CSS.
 - Set up code quality and testing pipelines, integrating SonarQube scanning with Jest unit tests.
- **Tech stack:** React, Next.js, TypeScript, Zustand, React Query, React Hook Form, Yup, Shadcn/UI, Tailwind CSS, CASL, Jest, SonarQube, ACF, Elementor, Vercel
- **Team size:** 8 members

♦ 01/2019 - 02/2019

NUS Programme Builder

Project URL: <https://mbabuilder.nus.edu.sg/>

Developed and maintained an **interactive curriculum exploration web application** for the National University of Singapore's MBA programme, enabling prospective candidates to **visualise, customise, and save personalised MBA journey plans** based on their professional interests and career goals. The tool integrates over 50 electives, multiple specialisations, experiential learning opportunities, student clubs, and international exchange options from the NUS MBA catalogue, and provides **dynamic recommendations** tailored to user input.

- Built an **interactive MBA curriculum planner** for NUS Business School, enabling dynamic exploration and customisation of programme routes and electives.
- Integrated academic course data, experiential opportunities, and recommendations based on user career intent.
- Improved admissions engagement through personalised journey generation and save/export functionality.

Stacks: React, Zustand, Typescript, Tailwindcss
